HOLE PRO® LAUNCHES INTRODUCTION OF ADJUSTABLE HOLE CUTTERS

June 2005 – LIGHTSMITH, a leading distributor of professional grade hole cutting tools, announced the launch of its Hole Pro Twin-Blade and Single-Blade adjustable hole cutters. Hole Pro adjustable hole cutter kits come with user replaceable tungsten carbide blades for cutting sheetrock, plaster, plywood, MDF, fiberglass, Hardi fiber-cement board, aluminum and brass sheet, and similar materials and High Speed Steel blades for cutting clean holes in wood, melamine, acrylic sheet, soft acoustic tile and most plastics

Both twin blade and single blade adjustable hole cutters come with the patented dust collecting ABS safety shield. The shield traps the dust and holds the cut plug. Both models easily adjust for the exact hole size needed. The composite plastic safety shield works like a portable drill press by keeping the hole cutter perpendicular to the work surface and the orange knob adjusts to limit the depth of the cut (no accidental cutting of hidden wiring or plumbing), while safely trapping all the dust and shavings.

The two twin blade models that are being introduced are the X-200 (adjustable from 1-5/8" - 8") and the X-305 (adjustable from 1-7/8" -12"). The two single blade models that are being introduced are the CL-220 (adjustable from 1-1/8" - 8-5/8") and the CL-285 (adjustable from 1-1/8" -11-5/8"). These adjustable hole cutters are built for electricians, plumbers, home theater installers, woodworkers, carpenters and general contractors.

Product Features

The twin blade models provide faster cutting, perfect balance, and great durability and are the best choice for cutting holes in residential and commercial settings. The single blade models make it easier for power hand drills to cut up to 16 gauge sheet metal, brass and aluminum sheeting and are recommended for everyday use in fabrication shops.

All adjustable hole cutter kits include the Hole Pro hole cutter, ABS shield, tungsten carbide & high speed steel blades, hex adjustment wrenches, hard shell carry case, and a 5-year warranty.

Ease of Use

Two hex wrenches are included in each kit. One is used to adjust the blade holder to make the exact size hole needed, and the second is used to change the blades. Both operations can be accomplished in a matter of seconds.

About Lightsmith - Hole Pro (www.holepro.com)

Lightsmith provides unique hole cutting tools for use by professional trades people, including electricians, HVAC and refrigeration contractors, audio and CCTV security systems installers, carpenters, MRO engineers, plumbers, and remodelers. Our tools save the operator time and enable safer operation at the job site to complete jobs faster. For customer support call 831-663-1100 or visit www.holepro.com for additional information.
